                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel tumour antigenic peptide or polypeptide comprising a sequence selected from 99 sequences fully defined in the specification. The tumour antigenic peptide or polypeptide comprises a sequence selected from 99 sequences fully defined in the specification, where the tumour antigenic peptide preferably has a sequence of Glu-Pro-CC Pho-Lo-Glu-Thr-Phe, and the polypeptide preferably has a sequence of Glu-Pro-CC The invention further provides a cancer vaccine comprising a tumour antigenic peptide or polypeptide, which has cytostatic activity. A tumour antigenic peptide or polypeptide, its encoding polynucleotide, a antigenic peptide, a recombinant vector containing the polymoleotide, a host transformed with the vector containing the polymoleotide, the polypeptide or its encoding polynucleotide and increases the expression of the tumour antigenic peptide, the polypeptide or its encoding polynucleotide and increases the expression of the tumour antigenic peptide or the polypeptide or the polypeptide is useful for treating cancer such as colon, mouth, lung, useful for treating cancer such as colon, mouth, lung, the polypeptide is useful for treating cancer. The invention also provides a pharmaceutical composition useful for tratafing cancer. The tumour antigenic cantigenic peptide or the polypeptide is useful as an antigenic cantigenic cantigenic peptide or the polypeptide is useful as an antigenic cantigenic peptide or the polypeptide is useful as an antigenic cantigenic peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tumor antigen peptides recognized by human leukocyte antigen (HLA)-A2 or HLA-A26 restricted cytotoxic T-cells for treatment and prevention of cancer including preparation of cancer vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a tumour antigen peptide recognised by human leukocyte antigen (HLA)-A2 or HLA-A26 restricted cytotoxic T-cells (CTL) and/or capable of inducing CTL. The tumour antigen peptide is useful for the treatment, prevention, diagnost, buccai production for cancers including colorectal, stomach, buccai, renal, lung, gynecological and prostate cancer. The present sequence represents the amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tiseues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT polypeptides; expression vectors and host cells comprising a racid; an antibody specific for a TAT polypeptide; fusion proteins comprising a TAT polypeptide, and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, cancer, pancreatic cancer, carrier, cancer, bancer, lung cancer, ovarian cancer, lung cancer, cancer, pancreatic cancer, cervical cancer, cancer, pancreatic cancer, cervical cancer, cancer, pancreatic cancer, cervical cancer, increased TAT molypeptides in chromosome identification and in gene therapy. The present sequence cancer and the cancer

The invention relates to a ferritin fusion protein comprising a fusion protein selected from a ferritin protein fused at the C-terminus or at the N-terminus with a protein or peptide capable of being fused to ferritin without interfering with the polymeric assembly of the resulting fusion protein. The fusion proteins are useful in the development of human and veterinary vaccines and therapeutics against e.g. AIDS or SARS, or in other applications including oxygen transport and the therapeutic delivery of drugs and other therapeutic agents, or as blood substitutes, image contrast agents, metal chelating agents, gelling agents, protein purification platforms, and therapeutic receptor-binding proteins. In examples of the invention, the ferritin H chain is fused to a number of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 HEERQHAEKLMKLQNQRGGRIFLQDIKKPDCDDWESGLNAMECALHLEKNVNQSLLEFPS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  individual, the method involves obtaining a serum sample from the individual and detecting the presence of either TIMP1 or Regl-alpha and an additional colorectal cancer-associated marker. The method of the invention is useful for diagnosing colon cancer in an individual. The present amino acid sequence represents a human colorectal cancer-associated protein of the invention.

The invention relates to a novel isolated nuclear and the PRO polypeptide encoded by it. A protein of the invention has antinflammatory, antidathritic, anticheumatic, immunosuppressive, costeopathic, antidathritic, anticheumatic, immunosuppressive, costeopathic, antidathritic, antidathrity. A polymuclectide attack interpretation may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the copypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, invenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogren's syndrome, systemic chromic arthritis, diabetes mellitus, immune-mediated renal thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polymeuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polymeuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polymeuropathy, dillain-Barre syndrome, configense, infectious or autoimmune chronic active hepatitis, primary disease, infectious or autoimmune chronic active hepatitis, primary confidense, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gulten-sensitive enteropathy, Whipple's disease, arthma, allergic rhinitis, atopic dermatitis, pooriasis, na altergic rhinitis, atopic dermatitis, food disease, asthma, allergic rhinitis, atopic dermatitis, food chypersensitivity, urticaria, an immunologic disease of the lung, constructed disease, graft rejection or constructed disease, graft rejection or constructed disease, graft rejection or graft-versus-host disease. The present sequence represents a protein or graft-versus-host disease. The present sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral
                                                                                                                                                                                           PRO; antiinflammatory; antiarthritic; antirheumatic; immunosuppressive;

These were isolated from expressed sequences tags (ESTB). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention

                      Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polypeptide encoded by human diagnostic and therapeutic polynucleotide, and to induce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel human diagnostic and therapeutic polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP, ABR41136-ABR41812). The invention also relates to polynucleotide sequences at least 90% identical to the dithp cDNA sequences of the invention; recombinant vectors, host cells and transgenic organisms comprising a dithp nucleic acid sequence; the recombinant production of DITHP proteins; antibodies specific for DITHP proteins, microarrays comprising dithp nucleic acid sequences; methods of detecting dithp nucleotide and protein sequences; methods of screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Daffo A, Jones AL, Tran AB, Dahl CR, Gietzen D, Chinn J, Dufour GE, Hillman JL, Yu JY, Tuason O, Yap PE, Amshey SR; Daughtery SC, Dam TC, Liu TF, Nguyen DA, Kleefeld Y, Gerstin EH; Peralta CH, David MH, Lewis SA, Chen AJ, Panzer SR, Harris B; Flores V, Marwaha R, Lo A, Lan RY, Urashka ME;

problem which produces and DITHP proteins may be used in the diagnosis of a wide variety of conditions including cancer and other cell proble. Dithp nucleic acid sequences and DITHP proteins may be used in the diagnosis of a wide variety of conditions including cancer and other cell proliferative disorders; autoimmune or inflammatory disorders; bacterial, viral, fungal or parasitic infections; hormonal disorders; metabolic disorders; and connective tissue disorders. They may also be used to screen for modulators of protein activity or gene expression. DITHP or cell type and to induce antibodies. The dithp nucleic acids are additionally be used in analysis of the proteome of a tissue or cell type and to induce antibodies. The dithp nucleic acids are additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of antisense sequences, as a source of probes and primers, in genotyping and identification of individuals, in the generation of transgenic animal models of human disease or knock in humanised animals, in toxicological testing, and in transcript imaging.
                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a DITHP protein which is involved in a blochemical pathway. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HEERQHAEKLMKLQNQRGGRIFLQDIKKPDCDDWESGLNAMECALHLEKNVNQSLLEFPS 120

The invention comprises the amino acid and coding sequences of a recombinant human ferritin protein, the invention also comprises a production method for the recombinant human ferritin protein. The present amino acid sequence represents the recombinant human ferritin protein of the invention.
                                                                                                                                                                                                                                                           HEERQHAEKLMKLQNQRGGRIFLQDIKKPDCDDWESGLNAMECALHLEKNVNQSLLEFPS 120
                                                                                                                                                                                                                                                                           This invention relates to the novel overexpression production of recombinant human H-chain ferritin (THN) in Pichia pastoris) pastoris). Specifically, it refers to the development of pharmaceutical compositions for the treatment of anaemia, due to the excellent capacity of this protein for storing iron. The present invention describes expression vector pGAPZ alpha A/rHN derived from Pichia pastoris and containing human H-chain ferritin (THN) gene. The human recombinant rHN is a homopolymer consisting of 24 H-chains having 24000 ba and its molecular weight is 576000 ba. This polypeptide sequence is the human H-chain ferritin protein of the invention.
                                                                                                                                                                                               9
                                                                                                                                                                                                                            9

The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69449) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellinaging, screening and diagnostic assays and for treating cellinactive diseases (cancer), neurodegenerative diseases (parkinson's or Alzheimer's diseases), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders,

Sequences AAU27676-AAU28019 represent full-length polypeptides and contig polypeptides of the invention. The proteins and their associated DNA sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog, convertions types of disorder in a mammalian subject such as a human, dog, convertions and neuroblastoma, autoimmune disorders such as convertive tissue disease, rheumatoid arthritis, disorders multiple sclerosis, connective tissue disease, rheumatoid arthritis, disorders multiple aparkinson's disease, Alzheimer's disease, Huntington's conversa, amyotrophic lateral sclerosis, spinal muscular atrophy and chorea, reperfusion injury, shock, sepsis and inflammatory disorders such as nephritis, crohn's disease. The sequences exhibit activity relating to anglogenesis, cell proliferation, cell differentiation, stem cell growth factor.

Coll proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from MIPO ce they be a figure of a figure 
Claim 10; SEQ ID NO 238; 153pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
C;Complex: The functional molecule is composed of 24 chains, is roughly spherical and co C;Function:
C;Function:
C;Abescription: intracellular protein that stores and transports iron in a soluble, nonto C;Superfamily: ferritin
C;Keywords: iron; iron binding; iron storage; iron transport; metalloprotein; multimer E;24,58,55,104/Binding aite: iron (Glu, Glu, Glu, Glu, Glu, His, Glu) #steatus predicted F;83/Binding site: iron (Asp) (shared with tetrameric partners) #status predicted F;83/Binding site: iron (Lys) (shared with tetrameric partners) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C;Accession: S68315
